

AUTUMN, 1890.

BARR'S DAFFODILS.

AWARDED THE ONLY GOLD MEDAL, AT THE SECOND GREAT
DAFFODIL CONFERENCE, APRIL 15th to 18th, 1890.

The home of *Narcissus Ajax Cyclamineus* (Spain).

KING STREET, COVENT GARDEN,
LONDON.

Nurseries—LONG DITTON, SURREY.

Five minutes from Surbiton Station (S.W.R.)

APPENDIX TO DAFFODIL CATALOGUE :

Barr's Irises, Lilacs, Pæonias, Christmas and Lenten Roses, Perennial Sunflowers, Phloxes, Michaelmas

Daisies, Plantain Lilies, Day Lilies, Hopaticas, pp. 17 to 29 ; also,

A selection of the Best Hardy Perennial Herbaceous Plants, pp. 29 to 33.

- No. 1. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and the other a Group of White Trumpet Daffodils—*drawn and arranged for the "Gardeners' Chronicle" by Agnes Barr. The two Plates for 1s.*
- No. 2. Beautiful Coloured Plate of a Group of White Trumpet Daffodils. 1s.
- No. 3. Beautiful Coloured Plate of Daffodils, representing *Incomparabilis Gloria Mundi, Incomparabilis Princess Mary of Cambridge, and Ledst Beatrice.* 1s.
- No. 4. Beautiful Coloured Plate of Daffodil, *Bicolor Horsfieldi.* 1s.
- No. 5. Beautiful Coloured Plate of Daffodils, representing *Cyclamineus (the Cyclamen-flowered Daffodil) and Triandrus albus (Angel's Tears Daffodils).* 1s.
- No. 6. Beautiful Coloured Plate of Daffodils, representing a Group of *Poeticus and Burbidgei varieties.* 1s.
- No. 7. Beautiful Coloured Plate of a Group of Daffodils, including *Cernuus pulcher, Milneri, Bicolor J. B. M. Camm, Nelsoni varieties, etc.* 1s.

 This List is arranged to be used as an Order Sheet, when a general order is given. On left hand margin write Quantities of Bulbs, etc., required, and on the following form Name and Address. The List is then wrapped for *book post*, and addressed to us with a Half-penny Stamp affixed. In the package there will be enclosed another List for future reference.

Part I.—A SELECT DESCRIPTIVE LIST OF BARR'S HARDY DAFFODILS,

FOR SPRING-FLOWERING IN OR OUT OF DOORS.

Awarded the only Gold Medal at the Daffodil Conference, April 15th to 18th, 1890.

The Collection of Hardy Daffodils from which this Select List has been compiled, embraces no fewer than 500 species and varieties, and is not only the largest Assortment in existence of this beautiful family, but is the most extensive Collection ever got together.

Visitors are invited to Inspect BARR'S DAFFODILS in flower during March, April, and May, at LONG DITTON NURSERY, close to the new Recreation Grounds, being five minutes from SURBITON STATION, South Western Railway, from Waterloo direct, or any Station on the Metropolitan District Lines of Rail, changing at Wimbledon.

GENERAL BULB CATALOGUE, Free on Application,

OF

Hyacinths, Tulips, Crocuses, Snowdrops, Chionodoxas, Snowflakes, Scillas, Lilies of the Valley, Dielytra, Spirea, English, Spanish etc. Irises, Ixias, Sparaxis, Tritonias, Babianas, Ranunculus, Anemones, Cyclamen, Hyacinthus candicans, Gladioli, Amaryllis, and a Choice Collection of Beautiful and Rare Bulbs and Tubercous-rooted Plants.

BARR'S HARDY DAFFODILS, DAFFADILLIES, DAFFODOWNDILLIES.

Awarded the only Gold Medal of the Daffodil Conference, held in the Chiswick Gardens of the Royal Horticultural Society, April 15th to 18th, 1890.

Extract from "The Gardeners' Magazine," 19th April, 1890.

The Editor remarks, "Daffodils will never cease to give delight, will never cease to be collected, and cultivated, and exhibited, and talked about, for, with all our wealth of hardy spring flowers, this group of beauties is unequalled for splendour of appearance, and all the qualities of a spring flower that engage the moral nature in a series of wholesome sympathies, to augment the delight that begins in the eye. A purgation of the varieties might seriously check collecting; but it would not diminish the beauty of these flowers, or impose a limit on the world's enjoyment of them.

"An incident of recent occurrence, of which we have cognizance at first hand, may be brought to bear on this grave question of reducing the number of varieties by severe selections. A gentleman universally respected for his knowledge, judgment, and taste in matters horticultural, demanded of a cultivator of Narcissi, assistance in making a selection of the very, very best, and the response was in a proper spirit. The cultivator consigned to one of his side pockets one hundred blank labels, the other saying that a dozen would be enough. When a variety had been selected as one of the very, very best, the name was written on one of the labels, and this was consigned to another side pocket. The inspection and selection proceeded pleasantly; the critical visitor in the free flow of his admiration forgot the limits he had proposed, and thus many very best flowers were made a note of, and the labels passed at a regular pace from the right hand pocket to the left. But now the business halted, for the trader said a fresh supply of blank labels would be required, and must be sent for, the visitor having already selected one hundred of the very, very best, while a considerable portion of the collection still remained for inspection. The anti-elimax tells its own tale, and may serve as a warning, that to select a dozen, or even fifty, of the very best Daffodils, is a business more easily talked of than performed."

Extract from "The Gardeners' Chronicle," April 12th, 1890.

"THE DAFFODIL KING."

"There will be few, if any, who will be disposed to question the right of Mr. Peter Barr to this designation. Previous to his accession, Daffodils were few in number. Gerard and Parkinson and Dr. Hill [Hale's Eden] knew a few varieties. Later on Haworth entered the arena. Deau Herbert, whose merits as a horticulturist are better appreciated by his successors than they were by his contemporaries, experimented with them. Leeds and Backhouse and Nelson won repute as hybridists. But in spite of these labourers, those who can look back twenty or twenty-five years will remember that the sorts generally known and cultivated could be counted by nits, whereas scores or even hundreds would now be required. What originally induced Mr. Barr to take up the subject we do not know; certain it is that he has taken it up with the indomitable zeal of an enthusiast. Putting commercial considerations on one side, as of secondary importance, he, though a man of business, has allowed himself to be governed by his love of Daffodils, and has spared neither labour nor money in their collection. He has made long and tedious journeys in rough countries in quest of his favourite plants. On these occasions his couch has not seldom been the rock, the sky his coverlet. Nor has collection been his only aim. Study of their peculiarities has been, and is, a perfect passion with him. Observation and research are continually increasing his store of knowledge, for truly nothing relating to Daffodils is foreign to Mr. Barr.

"Those who see the fields of Daffodils in the neighbourhood of London, inspect the piles in the markets or in the florists' shops, or admire the displays made at the several spring exhibitions, should remember with gratitude the name of Peter Barr. It is he who created this now vast trade; it is he who stimulated it; it is he who has added so much to our enjoyment, and at a cost which permits the masses to share the delight with their wealthier neighbours; it is he who is constantly enriching our stores with new varieties raised by himself, or obtained from other sources. Others, besides himself, are now engaged in the trade, and are worthily following in his footsteps. Far be it from us to disparage them, or to draw invidious comparisons. We simply note the fact that Barr was the first in the field, and that to his energy and zeal we owe the present vast extension of Daffodil lore, and the corresponding enhancement of love for the Daffodil. We do not know where Mr. Barr's library may be—that he has access to one is quite obvious, for he quotes Parkinson and Gerard, Haworth, Herbert, and Baker, as if he were quite familiar with what they have written on the Daffodil. But, wherever his library may be, or whatever use he may have made of literary material, it is quite certain that the plants themselves have formed the main study of his life; printer's ink and type have been useful accessories, but constant study in the field has been the chief source whence he has derived his knowledge. In spite of the now extremely numerous varieties of Daffodil and Narcissus (we may, for our present purpose, use the terms indifferently), they admit readily of being classed under some dozen groups. These groups may be called subgenera, or species, or varieties, according to the judgment of the observer. It matters comparatively little whether Mr. A. considers this group important enough to be called a sub-genus, while Mr. B. estimates it at specific rank only. What is of importance, is to be able to distinguish the group, and leave fanciers or students to give precedence and rank to the several groups according to their individual judgment.

"Mr. Barr works upon a plan which every botanist adopts as far as he is able—he endeavours to discover the original types—the starting points, that is, of all this variation. Keen observation and constant comparison enable him to do this with a degree of certainty that no mere casual student or amateur could hope to attain. Wanderings in Spain, and the Pyrenees, have enabled him in many cases to hunt his quarry in its original fastnesses, and thus to bring to light the originals of some of the garden forms, so that now in walking through his quarters he is able to say of such a form—this must be of Spanish origin, that of Italian extraction, and so on. From Bayonne to Gallieir, says Mr. Barr, all the Daffodils are sulphur-coloured. In Gallieir bicolor forms are found; then come yellow forms all round the coast as far as the Portuguese province of Estramadura. Daffodils of Italian origin may be recognised by the fact that they are apt to be thin in substance as compared with others.

"Researches of this kind have interest not only for the botanist but for the historian also—a singular illustration of the fact that the student of one department of knowledge cannot afford to discard the evidence supplied by another.

"Certain varieties, for instance, have lately been found in Irish gardens. The Narcissus now known as Henry Irving, turned up unexpectedly in a Dutch garden, where it must have existed for many a generation unheeded. Golden Spur had a similar origin. Whence, and how came these varieties? They must have existed in Ireland or in Holland, as the case may be, for generations; and the natural inference is that they were introduced into those countries by means of ecclesiastical or military travellers from Spain or Italy. But, says Mr. Barr, in answer, if this suggestion were

[Barr and Son,

correct, we ought to find the originals still wild, or, at least, in cultivation in Spain or southern Europe, but it is not so. This, of course, opens up the question whether they may not, indeed, have had the origin supposed, but have become modified in course of time in their new location. At least, this is a plausible supposition, one that some people would pass by as insoluble, and others treat as a matter of indifference. Mr. Barr, however, would, we are quite sure, not consider any Daffodil problem as absolutely insoluble; still less would he treat it with indifference.

"The Daffodils, with their trumpet-shaped flowers and large coronas or crowns, and the Narcissi with their flat flowers and shallow cups, vary in stature, colour, and form of the parts of the flower. There is the green ovary or young seed pod, which in some flowers is cylindrical, in others obovoid with the broad end of the egg uppermost, in others angular. Surmounting this is the perianth tube, long, slender, cylindrical, or slightly dilated upwards, greenish or yellowish in all the Narcissi proper, broadly funnel-shaped, and relatively short in the true Daffodils. Then comes the limb of the perianth with its six lobes broad or narrow, blunt or pointed, white or of various shades of yellow, spreading or directed forwards. In the centre is the cup or corona, short and shallow, like a saucer in the true Narcissi, yellow or orange—especially at the edge, often more or less folded, while in the Daffodils or Trumpet Narcissi the corona is as long as the segments, or nearly so, broadly tubular, of various shades of yellow or orange, but generally darker in shade than the segments themselves. The free margin of the trumpet is regularly or irregularly lobed, and more or less reflexed. Notice should also be taken of the relative length and position of the stamens and styles, and of the periods at which they respectively become mature. All these peculiarities, and many others that might be mentioned, are familiar to the hotanist, and are detailed in the works of Baker and Burbidge, but it may be of service to the amateur to indicate where he should look for differences between his favourites.

"Mr. Barr's study is situated at Long Ditton, a few miles from Richmond and 2 miles from Kingston, being easily reached from those towns, and is close to Surbiton Station on the Main Line of the South Western Rail. It consists of some fifteen acres of flat sandy loam, such as is found throughout the Thames Valley, and this area is largely devoted to Daffodils. Other plants there are—Anemones, Muscaris, Primroses, Pæonies, Lilies, and so forth; but just now (April) the main attraction centres in the Daffodils, which occupy the greater portion of the ground. While other cultivators grow some dozen or twenty varieties at most, Mr. Barr is not satisfied with anything less than a complete representation of the genus. Hence, we find the Hoop Petticoat Narcissi, the Triandrus group, the Cyclamineus series, the big Daffodils, the little Daffodils, the least Daffodils, the bicolor Daffodils, the Cernuus contingent, the Incomparabilis tribe, the Odorus section, the Ringulosus set, the Tridymus clan, the Poeticus breed, the Polyanthus and Tazetta hordes, all as fully represented as possible; and then who shall number, much more describe, the infinite variety of hybrids and crosses, the Leedsii mixtures, the Barri blendings, the Burbidge combinations, and the Bernardi amalgamations.

"Mr. Barr, by long practice, pronounces judgment upon the supposed parentage of these crosses. In some cases, the correctness of the affiliation is obvious to an unpractised eye, but in others we require to be shown, and even then the unpractised eye fails to grasp the points which seem so obvious to the King of the Daffodils. His majesty even goes so far as to trace in the hybrid something of the character of the raiser. This may sound far-fetched; but if one thinks of the scholarly, sensitive, refined experimenter, and of the uneducated, rough-and-ready cultivator, it is easy to see that though both may be working for a common aim, their methods are likely to differ, and the results correspondingly to be diverse—alike in principle, modified in detail.

"All this and much more we pick up from Mr. Barr as he conducts us round his quarters; we rapidly note the main differences in the colour, form, and size of the perianth; specially are we struck with the variations in colour and breadth of the "grass," or foliage. Clearly the leaves would afford an excellent field for research, and we have no doubt whatever, that a clue to the solution of some of the Daffodil problems we have alluded to, would be afforded by a careful microscopical scrutiny of the leaf-structure. But who is to do it? we ask ourselves in despair, as our guide thrusts into our cab, as we are leaving, a big sheaf of varieties, with their fluttering labels attached, as numerous as the bits of paper in the praying wheels of the Tibetan priests.

"Ah! there it is—the old story; there is so much to be learnt, so few to learn—so little time or opportunity, so much other work that must be done. Even the King admits that he is occasionally beaten by circumstances, and if that be so with him, *a fortiori*, it must be so with humbler individuals. At any rate, we are obliged to hold our hands, and to defer any special notice of particular varieties till another occasion; but let all who wish to know something more about Daffodils than they can learn from the exhibition table follow our example, and betake themselves to Long Ditton, and pay homage to the Daffodil King."

CULTURE, ADAPTATION, ETC., OF THE DAFFODIL.

Daffodils are at once the most beautiful and graceful of all hardy Spring flowers; for centuries they have adorned our gardens, and withstood uninjured our severest winters, their blossoms suffering less from frost, snow, and rain, than any other spring flower, and truly does Shakspeare speak of them as

"Daffodils,
That come before the swallow dares, and take
The winds of March with beauty."

For filling beds or growing in groups in mixed borders and shrubberies, no flower of spring can compare with the Daffodil, and when naturalized in woodland walks, or forming large groups in grass, or on sloping banks, the effect is splendid. All the strong growing Daffodils are adapted for naturalization, and these include such fine sorts as Emperor, Empress, Horsfieldii, as well as many of the white trumpet varieties, also Sir Watkin and all the varieties from Incomparabilis to Poeticus, etc., their noble or chastely coloured flowers, in such situations, being seen to great advantage. The slender and dwarf-growing sorts, such as Minor, Nanus, Minimus, Juncifolius, Triandrus albus, Corbularias, Cyclamineus, etc., naturalize well on rockwork, and in mountainous districts, on slopes facing the south. For culture under glass, in pots, the Daffodil ranks with the Hyacinth, and when 3 to 6 bulbs of the strong growing sorts are cultivated in a pot, the effect is splendid; of the dwarf growing kinds above enumerated 6 to 18 bulbs in a pot give a fine effect. The small growing Daffodils, especially *N. minimus*, *Cyclamineus*, and *Corbularia citrina* make charming edgings. As a cut flower the Daffodil is unsurpassed, and greatly prized.

Daffodil flowers can be had in abundance from January to June by, FIRSTLY, planting a set in pots or boxes, and treating as recommended on page 4; SECONDLY, planting a set out-of-doors, in September; and, THIRDLY, planting sets out-doors, in succession, from September to Christmas. The late plantings give beautiful flowers in May. Those for decoration in pots during January or February, should be potted up as early as possible, and receive the same cultural treatment as recommended for the Hyacinth.

Out-of-doors the various kinds of Daffodils form a natural succession. In mild seasons, the varieties of *N. Pallidus præcox* and *N. Obvallaris* flower early in February, and these are followed by others in constant succession, till the double white *Gardenia*-flowered Daffodil closes the season about the end of May.

Amongst the new handsome species found by Mr. Barr, 1887 and 1888, *N. Santa Maria*, the richest orange-yellow trumpet Daffodil known, and of the *Johnstoni* group, Mrs. George Cammell, Pelayo, and Queen of Spain, are great beauties.

In arranging Daffodils for effect in the flower garden, or in potting up for indoor decoration, it is well to bear in mind that they form a natural succession, which is fully explained under the heading of each group, but is here noticed to show which groups flower together, as follows: FIRST, the earliest are the Trumpet Daffodils, early-flowering *Corbularias*, and *Triandrus* varieties. SECOND, in succession, flowering together—*Incomparabilis*, *Barrii*, *Leedsii*, *Odorus*, Early-flowering *Poeticus*, and *Burbidgei* type, and its early flowering varieties. THIRD, in succession, flowering together—*Nelsoni*, *Tridymus*, *Backhousei*, *Bernardi*, and the *Jonquils*. FOURTH, in succession—*Biflorus*, late-flowering *Poeticus*, late-flowering *Burbidgei* varieties, *Schizanthus orientalis* and *Gracilis* close the Daffodil season. In the middle season, representatives from all the groups may be found in bloom at the same time, therefore, those who come to see our collection at our Long Ditton Nursery, and can only make one visit, should do so in April.

The New Daffodils offered in the present issue are distinguished by *, **, ***, and †.—Those Daffodils which have been awarded First Class Certificates are distinguished by —. The raising of New Daffodils is the work of many years, and the amateurs who raised the new Daffodils marked with *, **, ***, and †, have passed from our midst, but have left behind them glorious memories, not of ephemeral productions, but "things of beauty," that will enrich English flower gardens for centuries, as the older Daffodils have done from very remote periods. Those who desire to know more of the Daffodil than is recorded in these pages, will find in "*Ye Narcissus or Daffodyl*" (price 1s.) much to interest them in the literature, poetry, and hybridisation of *Narcissi*. Purchasers of Daffodils to the value of 21s. and upwards, will have enclosed in the package, two large illustrations of groups of Daffodils, sketched and arranged by Miss Agnes Barr, for *The Gardeners' Chronicle*, of spring, 1888 and 1889.

The Daffodils or *Narcissi* enumerated and described in the following pages, comprise all the finest sorts in commerce. They are for the most part varieties, which we have been introducing annually, of hybrids and varieties raised by the late Mr. William Backhouse, known as the *Weardale Daffodils*, and those raised by the late Mr. Edward Leeds, and known as the *Longford Bridge Daffodils*. The sorts indicated by *, **, ***, and †, are new varieties mostly raised by the gentlemen named; these becoming the property of Mr. Barr, he arranged and named them, the names being afterwards revised by the Committee, appointed for that purpose, at the first Daffodil Conference, held 1st April, 1884, under the auspices of the Royal Horticultural Society.

THE TWO SEPARATE LISTS OF DAFFODILS prepared for this Catalogue, comprise—

- 1st. No. 1 List embracing only highest class flowers, and a few specially distinct species or varieties.
- 2nd. No. 2 List including those we have large stocks of, and these are offered at reduced prices to those who plant extensively for cut flowers, whether under glass or out-of-doors, also those who desire to naturalize Daffodils in grass, shrubby borders, etc.

CULTURE AND ADAPTATION OUT OF DOORS.—The Daffodil may be grown in any soil and situation, but thrives best in a fertile well drained loam (*avoid manure as much as possible*), and, in the warmer parts of England, when possible, they should be planted in a situation facing north or north-east, but protected from north or north-east winds. In planting, the top of the bulb should be about two inches below the surface, according to its size; but when grown in permanent beds, &c., where summer flowers are cultivated over the bulbs, plant two or three inches deeper, and use only the strongest growing Daffodils for such purposes, taking care the drainage, natural or artificial, is perfect. For beds, the large-flowering trumpet and *Incomparabilis* varieties of Daffodils are charming, and for edgings, the dwarf growing kinds, such as *Cyclamineus*, *Minor*, *Nanus*, *Minimus*, *Nelsoni* minor, *Triandrus albus*, *Juncifolius*, and all the *Corbularias*, are most beautiful, and are quite hardy. The *Corbularias*, however, should be annually lifted in July, and replanted in October.

CULTURE AND ADAPTATION INDOORS.—If for decoration in pots, use three to six bulbs of strong-growing sorts, according to size of bulb, in a 4 or 5-inch pot; but of small-growing kinds, such as *N. Minimus*, *Nanus*, *Minor*, *Cyclamineus*, *Triandrus*, *Juncifolius*, and *Corbularia*, a greater number of bulbs should be used. These dwarf-growing, small-flowered species are most charming in pots. If Daffodils are grown for cutting early in the season, plant thickly, in boxes 15 inches by 10, and 5 to 6 inches deep, using ordinary potting soil. The pots or boxes should then be placed out of doors, on a bed of ashes, and covered with 6 inches of the same material, or covered with cocoa fibre, which is preferable if it can be had. The pots or boxes should remain out of doors till full of roots, and top growth has commenced. Portions may then be removed indoors, in succession, and placed in a moist forcing-house, and plentifully supplied with water, care being taken that the plants do not get drawn, from an insufficient supply of air.

A useful selection of Daffodils should consist of varieties from the three groups. The *Magni-Coronati* or Trumpet and *Corbularia* Sections of Daffodils, out of doors, flower in succession, one variety following the other from February till May. The *Medio-Coronati*, *Nonsuch* or *Incomparabilis* and other sections of hybrid Daffodils, begin flowering out of doors in March, and succeed each other till May. The *Parvi-Coronati*, *Burbidgei* Daffodils, the *Poet's Narcissi*, the *Tazetta* or Bunch-flowered Daffodils, &c., out of doors, commence flowering early in April, and furnish a succession of blossoms till June. When grown under glass, all the Daffodils flower much earlier than the periods above named.

Cut blooms of Daffodils are always useful, and are in abundance at a season when other flowers are scarce. They also supplement and associate admirably with hot-house flowers. For upwards of twenty years, for three months in Spring, cut flowers from our collection of Daffodils have been exhibited at the various London Flower Shows and Fortnightly Meetings of the ROYAL HORTICULTURAL SOCIETY, also at the Spring Flower Shows held at the ROYAL BOTANIC GARDENS, CRYSTAL PALACE, ROYAL AQUARIUM, and many other places in town and country.

At the above-named places we have been awarded numerous Gold and Silver Medals, Prizes, Certificates, Votes of Thanks, etc. Our Grand Display of Daffodils at the Second Great Daffodil Conference, held April 15th to 18th, 1890, was awarded the ONLY GOLD MEDAL

DISTINGUISHING CHARACTER.—*Crown or trumpet as long or rather longer than the divisions of the perianth.*

The first systematic arrangement of this family is found in Parkinson's "Paradisi in Sole Paradisus Terrestris, or, A Garden of All Sorts of Pleasant Flowers," published 1629. Itaworth, in November, 1831, published the revised edition of his Narcissus Monograph, and about the same time Dean Herbert embodied in his "*Amaryllidaceæ*" the result of his study of the genus Narcissi from living plants. Baker's review of the genus Narcissus appeared in the "*Gardener's Chronicle*," 1870, and in a revised form "the review of the genus Narcissi to 1887," is now embodied in "Baker's Handbook of the *Amaryllidææ*," published 1883, (price 5s.). Burbidge's "History and Culture," with coloured plates and descriptions of all known species and principal varieties of Narcissus, written in a charming style, tracing the literature of the Daffodil back to 1570, was published 1875; Mr. Barr at this date was working into form Messrs. William Backhouse and Edward Leeds' hybrids and varieties, so that only a very few of these are mentioned in Burbidge's book. "*No Narcissus or Daffodyl*," by F. W. B. and P. B., may be considered a supplement to Mr. Burbidge's illustrated work, as it brings up Daffodil lore to 1884, with a complete descriptive list of all Narcissi, ancient and modern. It is understood Mr. Burbidge has a New Popular Work on the Daffodil in hand, which may be expected at no distant date. It would probably have appeared by this time, but so many new Narcissi are being discovered, and as this book is to be the great work of his life, he desires to make it as complete as Parkinson's was in his day.

The Trumpet Daffodils, Group I., flower in the following succession: *N. Pallidus* *præcox*, var. *asturicus* and var. "Blond éré," from January; *Ovballaris*, *Minimus*, *Nanus* and *Minor*, from February, closely followed by *Cyclamineus*, *Santa Maria*, *Oporto Yellow*, *Rugilobus*, *Major*, *Spurius*, *Golden Spur*, *Henry Irving*, the *English Lent-Lily*, the *Scotch Garland Lily*, *Horsfieldii*, *Empress*, *Princeps*, *Cernuus*, *Colleen Bawn*, etc., which are followed by *Emperor*, *Maximus*, *Dean Herbert*, *Michael Foster*, *James Walker*, the two *Canins*, the two *Burbidges*, *Dr. Hogg*, *Cernuus pulcher*, *Exquisite*, *Grandis*, etc.

The Grand Trumpeters include all the large trumpet varieties of Bicolor, Emperor, Maximus, Golden Spur, Henry Irving, Major, Princeps, Rugilobus, Spurius, Blondin, Telamonius plenus, Dean Herbert, Michael Foster, James Walker, the two Camms, the two Burbirds, Dr. Hogg, St. Brigid, John Nelson, Capt. Nelson, Shirley Hibberd, William Goldring, Cernuus pulcher, Hudibras, Exquisite, etc.

☞ All the Trumpet Daffodile are prized for pot-culture, flowering undsr glass with the Hyacinth, and should be cultivated in the same way, three to five roots in a 4 or 5-inch pot. The cut flowers of Daffodile are much in demand for bouquets and vases. *For general cultural directions, see page 4.*

12 and 13, King St., Covent Garden, 1890.]

AJAX, OR TRUMPET DAFFODILS.

THE SNOW-WHITE DAFFODIL (N. MOSCHATUS).

THE TENBY YELLOW DAFFODIL.

No. 1 LIST CONTAINING ONLY HIGH-CLASS & BEAUTIFUL HARDY DAFFODILS, WITH A FEW SPECIALLY DISTINCT SPECIES AND VARIETIES.

Bulbs supplied September, October, November, and December.

In Spring our Collection of Daffodils underwent a very critical examination, which resulted in our dividing it into two Sections. NO. 1 SECTION, embraces the highest class, and most distinct varieties, and far surpasses in beauty and rich diversity, any assortment of Daffodils ever before offered to the public. It contains the cream of our immense Collection (about 500 sorts), and consists mostly of new sorts, many of which were offered for the first time 1887, 1888, and 1889.

* indicates the new varieties of Daffodils which we had introduced up to 1886.

**	"	"	"	"	"	"	"	1887.
**	"	"	"	"	"	"	"	1888.
†	"	"	"	"	"	"	"	1889.
§	"	"	"	"	"	"	"	1890.

Those without any special indication are species and varieties known before Backhouse's and Leeds' Daffodils were introduced by us.

— indicates the Daffodils which have been awarded First-Class Certificates. Many of our finest Daffodils have not been Certificated, owing to their not being in condition when the Certificating Committees met. We simply name this to guard purchasers against supposing that those Certificated are the only varieties of high merit.

NARCISSUS CORBULARIA

(*Bulbocodium*).

The Hoop Petticoat, or Medusa's Trumpet Daffodils.

These, for pot-culture, are beautiful, 6 or more bulbs in a 4 or 5-inch pot, or a greater number in flat pans.

Quantity.	per doz.	s.	d.	s.	d.
..... LARGE YELLOW HOOP PETTICOAT (<i>Corbularia conspicua</i>), golden-yellow, charming for edgings, small beds, and pot-culture .p. 100, 6/6	1	0..
..... " " , extra large bulbs, p. 100, 8/6	1	3..	0	3	
— * WHITE HOOP PETTICOAT (<i>C. Monophylla</i> , C. Clusii), pure white, grow in pots or under shelter of hand lights or frames fine cultivated bulbs...p. 100, 18/	2	6..	0	3	
— * LARGE SULPHUR HOOP PETTICOAT (<i>Corbularia citrina</i>), beautiful pale citron, <i>early-flowering</i>	2	6..	0	3	
..... * SMALL YELLOW HOOP PETTICOAT (<i>Corbularia tenuifolia</i>) rich yellow, <i>early</i> and beautiful for pots or for edgings out-of-doors	5	6..	0	6	
..... * SMALL YELLOW HOOP PETTICOAT (<i>Corbularia nivalis</i>), <i>early</i> and beautiful for pots or edgings.....	3	6..	0	4	
..... † LARGE EARLY-FLOWERING YELLOW HOOP PETTICOAT, found in Spain by Mr. Barr, 1888, very beautiful, flowering out-of-doors from Februaryp. 100, 21/	3	6..	0	4	

AJAX, or TRUMPET DAFFODILS.

Yellow Varieties.

These, cultivated in pots, are exceedingly decorative indoors, and extensively used for this purpose, 3 to 5 bulbs in a 5-inch Quantity. pot. per doz. each

..... * ARD RIGH (<i>Yellow King</i>), large full yellow perianth, trumpet large and deep yellow, <i>early</i>p. 100, 30/	4	6..	0	6	
..... † BASTEMIL, found by Mr. Barr in Spain, 1888, a fine bold flower, with large orange-yellow trumpet, elegantly filled and recurved at brim, perianth sulphur, suffused yellow, and gracefully twisted	15	0..	1	6	
— * CAPTAIN NELSON, soft clear yellow, trumpet long, broad, and spreading, large handsome flower	12	6		
..... † COUNTESS OF ANNESLEY, perianth sulphur-yellow, rich full yellow trumpet, large bold flower, <i>early</i>	7	6..	0	9	
— * CORONATUS (GENERAL GORDON), large light yellow perianth, broad expanded full yellow trumpet	18	0..	1	9	
— * CYCLAMINEUS MAJOR, a great novelty, flowers clear rich full self-yellow, with perianth gracefully reflexed, and trumpet elegantly serrated, a beautiful dwarf Daffodil for edgings, rockwork, and flower borders, etc., or to naturalize in grass; it also makes a charming pot-plant, several bulbs in a pot, 100, 40/	5	6..	0	6	

[Barr and Son,

GROUP II.—MEDIO-CORONATI OF BAKER.

Queltia, Philogyne, Ganymedes, etc., of Salisbury, Haworth, and Herbert; Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.

DISTINGUISHING CHARACTER—Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.

The varieties in this group are hybrids, excepting Triandrus, Odorus, and Juncifolius, which are species. Incomparabilis is found wild in France, but Herbert, Leeds, and Backhouse produced it by crossing Poeticus with a Trumpet Daffodil. Macleanii (*Panza bicolor of Salisbury*) is considered to be a hybrid between a Tazetta and a Trumpet Daffodil. Although we have no positive data as to the parentage of all the new hybrids and varieties described in this group, we think it may fairly be assumed that Poeticus and the Trumpet Daffodils gave all the varieties of Incomparabilis; Poeticus and Incomparabilis would give Barrii, which may be described as shorter cupped forms of Incomparabilis; Poeticus and Cernuus, or Albicans, gave the varieties of Leedsii, "the Eucharis-like Daffodil," which has the perianth white, and the crown white, or primrose. Mr. Baker however suggests as the parent of Leedsii, Montanus instead of Cernuus or Albicans: those who at present are hybridizing Narcissi will perhaps settle this point. Humei, Mr. Baker suggests as a hybrid of Montanus and Incomparabilis. Poeticus and Bicolor would give Nelsoni, Backhousei, and Sabini. Bernardi we know to be a hybrid between Poeticus and Variiformis, Mr. Barr having collected it from amongst these two species. Tridymus, we think, is a hybrid between a Tazetta and a Trumpet Daffodil.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great beauty, and, as cut flowers, are extensively used for furnishing vases and table bouquets.

☞ All the varieties enumerated in Group II. are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated the same way, 3 or 5 large bulbs in a 5-inch pot; varieties which produce small bulbs, as Triandrus and Juncifolius, 6 to 12 bulbs to a 5-inch pot. The cut flowers of this Group are much in demand for bouquets and vases. General cultural directions, p. 4.

☞ These Woodcuts, which are much reduced from natural size, must be considered simply as illustrating the forms represented in this group, but conveying no idea of the magnificence of the species and varieties described.

Represents N. INCOMPARABILIS, BARRII, and LEEDSII VARIETIES.
Very much reduced from natural size.

N. BACKHOUSEI.

Very much reduced from natural size.

12 and 13, King St., Covent Garden, 1890.]

Represents N. NELSONI, SABINI, MACLEAII, and BERNARDI.
Very much reduced from natural size.

N. TRIDYMUS.

Very much reduced from natural size.

NARCISSUS INCOMPARABILIS

CHALICE-CUPPED NONSUCH DAFFODILS.

These are exceedingly decorative when cultivated in pots, and are extensively used for this purpose, 3 or 5 bulbs in a 5-inch pot. For beds and borders very decorative, naturalized in grass very effective.

N. TRIANDRUS VARIETIES.
Reduced from natural size.**NARCISSUS TRIANDRUS (Ganymedes).**

The Cyclamen-flowered Daffodil.

Graceful for pot-culture and beautiful on rockwork.

This elegant Daffodil has been named by botanical authorities *Triandrus*, *Reflexus*, and *Calathinus*. We have adopted Linnaeus' name, *Triandrus*.

Quantity.	per doz.	each
	s. d.	s. d.

.....*ALBUS (<i>Angel's tears</i>), white, flowers variable in size, perianth elegantly reflexed like a <i>Cyclamen</i>	3	6...0	4
..... ..cultivated bulbs, p. 100, 25s.	2	6...0	3
.....**CALATHINUS, large snow-white flowers. Collected on the Glennan Islands, <i>very rare</i>7	6	
.....PULCHELLUS (<i>true</i>), primrose perianth, eup white, <i>very rare</i>3	6	

For the Cyclamen-flowered Ajax N. cyclamineus, see p. 6.

N. JUNCIFOLIUS.

Not much reduced from natural size.

NARCISSUS JUNCIFOLIUS.

The Least Rush-leaved Daffodil.

Elegant for pot-culture, charming for rockwork, and valuable for edgings.

..... JUNCIFOLIUS, with graceful rich yellow flowers, a slender growing dwarf species.....per 100, 10s. 6d.	1	6... ..	
--	---	---------	--

NARCISSUS INCOMPARABILIS PLENUS.

The Double-flowered Nonsuch & Peerless Daffodils.

Suitable for pot-culture.

.....AURANTIUS PLENUS (<i>Butter and Eggs</i>), the double yellow Nonsuch Daffodil, with orange neetary, very effective in clumps and masses per 1000, 50/; per 100, 5/6	1	0...0	3
.....ALBUS PLENUS AURANTIUS (<i>Eggs and Bacon</i> or <i>Orange Phoenix</i>), white Peerless Daffodil, with orange neetary, very showy. <i>Strong Bulbs</i> , per 100, 15/	2	6...0	3
.....ALBUS PLENUS SULPHUREUS (<i>Codlins and Cream</i> , <i>Sulphur Phoenix</i>), white Peerless Daffodil, with sulphur neetary, a very chaste flower greatly prized for cutting. <i>Strong Bulbs</i> , per 100, 50/	6	6...0	8

In the above three Daffodils, there may be found amongst the flowers gradations from a rose-like doubleness to an almost single flower, some with only a few florets in the eup. In this almost single state, many have supposed that it is the first stage to doubling, whereas it is an effort to go single. "Butter and Eggs" frequently passes from double to single, but it is a rare occurrence for either *Eggs* and *Bacon*, or *Codlins* and *Cream* to become single.

NARCISSUS ODORUS PLENUS.

Queen Ann's Double Jonquil.

Suitable for pot-culture.

.....ODORUS PLENUS, handsome rich full yellow flowers, resembling a small neat double roseper 100, 32/	4	6...0	6
--	---	-------	---

[Barr and Son,

GROUP III.—PARVI-CORONATI OF BAKER.

The Small-crowned Daffodil or True Narcissus, which includes

Burbidgei and Poeticus (the Purple-ringed Daffodil); Biflorus (the Primrose-Peerless Daffodil); Polyanthus or many-flowered Narcissus (Hermione and Helena of Haworth); Gracilis, Schizanthus orientalis, and Sweet-smelling Jonquils.

N. BURBIDGEI VARIETIES.
Very much reduced from natural size.

N. POETICUS VARIETIES.
Very much reduced from natural size.

DISTINGUISHING CHARACTER—Crown less than half as long as the divisions of the perianth.

In this series, Poeticus (the purple-ringed Daffodil) is the true Narcissus; Burbidgei is a hybrid one remove from Poeticus, and is the connecting link between Groups II. and III. (See Coloured Plate in "The Garden," 1880.) Biflorus is Parkinson's Primrose-Peerless. Gracilis and Tenuior are the Helena of Haworth; Jonquil, the Jonquilla of Linnaeus; Polyanthus Narcissus, the Hermione of Haworth and Tazetta of Sibthorp.

The early-flowering Poeticus varieties commence flowering in March, and the late-flowering varieties close the Daffodil season in June. Burbidge's hybrids of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthus orientalis, and the Double White Gardenia-flowered Daffodil, are among the latest to bloom.

☞ The Daffodils in this Group are good pot-plants for indoors, flowering with the Hyacinth, and should be cultivated in the same way, 3 or 5 bulbs in a 4 or 5-inch pot. The cut flowers of this section are greatly in demand for bouquets and vases. *General cultural directions, page 4.*

NARCISSUS BURBIDGEI.

Burbidge's Hybrid Poet's Daffodils.

Very beautiful as pot-plants.

The Burbidgei Narcissi give a succession of flowers from March to middle of May, commencing before Poeticus ornatus, and following one after another in succession, to middle of May.

Quantity.	per doz. each

NARCISSUS POETICUS.

The Purple-ringed Poet's Daffodil.

Poeticus divides naturally into early and late-flowering varieties, a circumstance which is not generally known. It is from the early section, especially Poeticus ornatus that Covent Garden is supplied with forced cut flowers from January to March.

March and April Early-flowering Poeticus.

NO. 2 LIST OF BEAUTIFUL HARDY DAFFODILS AT REDUCED PRICES.

List of Hardy Cheap Showy Daffodils, consisting of sorts we hold large stocks of. These are good varieties for forcing, and prized "to box up" for cut flowers, and to grow in pots for house decoration. See *Cultural Directions under Glass*, page 4. In filling flower beds, growing in masses in flower borders, and grass, or to naturalize in woodland walks, plantations, woods and meadows, we strongly recommend all of them, as they are vigorous free-growing Daffodils.

Special quotations given for large quantities of any particular varieties.

BEARDLESS SPECIES OF FLAG IRISES.

The Irises offered in this section are all perfectly hardy, and quite distinct from the Bearded groups. Those marked with an * make grand aquatics. All the other Iris in the group, with the exception of *Cristata*, *Ruthenica*, and *Stylosa*, may be grown as marsh aquatics. *Cristata*, with its lovely amethyst-blue flowers, is charming on banks and rock-work in sunny sheltered places, and likes to be moderately dry during winter. *Fetidissima* is valuable for damp shady situations, and its seed vessels are much prized in winter.

Quantity.		each—s. d.

For various Beautiful bulbous and Tuberous-rooted Iris Species, see our GENERAL BULB CATALOGUE.

BEAUTIFUL JAPANESE FLAG IRISES.

IRIS KÄMPFERI (THE CLEMATIS-LIKE IRIS OF JAPAN).

The magnificence of these splendid new Japanese Irises surpasses any written description that we could give of them. The large flat flowers measure from 6 to 8 inches in diameter, with a breadth of petal 3 to 3½ inches; the prevailing colours are white, magenta, crimson, rose, lilac, lavender, French-grey, purple, violet, and blue, each flower usually representing several shades, while close under the petaloid stigma there is a brilliant yellow or orange blotch or feather, more or less conspicuous, and almost always surrounded, except in the whites, by a halo of blue or violet. Coloured plates of *Iris Kämpferi* were issued by *The Garden*, 1876 and 1881.

CULTURE.—A naturally good adhesive, moist, loamy garden soil, laying well to the sun, suits this plant. When a soil has to be specially prepared, we recommend leaf-soil, loam and peat in equal parts; but manure should not be given unless as a liquid. We are of opinion that the *Iris Kämpferi* is semi-aquatic in summer, but should be moderately dry in winter. Professor Foster's experience is to keep the soil round the plants in a wet quagmire state, from early in April to October. We have followed this plan with great success, and our plants make strong growth, and give abundance of flowers.

HARDY HERBACEOUS CHINESE DOUBLE PÆONIAS.

VARIETIES OF ALBIFLORA. Plants supplied from October to March.

The flowers, which are produced in June, are large and handsome, varying in colour from pure whites and blushes, to roses and the deepest crimsons, while most of them are deliciously rose-scented. The ornamental and massive foliage in addition, renders these Hardy Pæonias attractive plants for the herbaceous border or to intermingle with shrubs. They are of simple culture, succeeding in any ordinary garden soil. The flowers are greatly valued for cutting, as they travel well, and last long in water.

CULTURE.—Trench the ground before planting, as deeply as possible, adding abundance of rotten manure, and then mulch the surface with manure. In Summer, if convenient, give a plentiful supply of liquid manure twice a week to encourage a rapid development, as the plant is decorative in proportion to its size. The Pæony may be planted in any position, but, considering that the flower buds are formed early in Spring, it is preferable to grow the plants where the sun's rays do not fall upon them, in Spring, earlier than 11 or 12 o'clock.

FUNKIA, OR THE HARDY PLANTAIN LILY.

Plants supplied from October to March.

These handsome hardy herbaceous plants develop their ornamental foliage early in Spring, and in Summer and Autumn throw up a profusion of fine Lily-like flower spikes. The leaves range in size from the miniature to the gigantic, and from pale green to a deep glaucous-green. All are grand plants for edgings, and the large-leaved sorts adapted especially to naturalize in wild gardens, also to grow as distinctive objects on the grass of parks, etc., as exemplified by their extensive use in Hyde Park. For pot-culture under glass we especially recommend, for its neat snow-white flowers, *Ovata spathulata speciosa*, a small-leaved variety, and for its large spikes of beautiful snow-white flowers, *Subcordata grandiflora*, a handsome large-leaved variety; also those with variegated foliage, especially the varieties of *Undulata*. Out of doors, in shady and somewhat moist situations, the Plantain Lily is most decorative, the foliage developing to its full size.

HELLEBORUS, OR CHRISTMAS AND LENTEN ROSES.

Plants supplied up to March.

Christmas and Lenten Roses are hardy Winter-flowering plants, covered with blossoms at a period of the year, when flowers out-of-doors, are a rarity. In this family there is much variety, both in flower and foliage, and established plants in flower borders and on rockwork, are highly decorative.

☞ The Christmas and Lenten Roses make good pot-plants, and are well worth the attention of gardeners to grow into large specimens, for Conservatory decoration.

THE CHRISTMAS ROSE (HELLEBORUS NIGER).

The Christmas Rose is in flower during December and January. To have the blossoms pure white for Christmas decoration, the plants should be protected at the time of flowering. A hand-light, resting on bricks, will be sufficient for a large specimen; but when a great number of flowers are required, a temporary pit should be made, the natural soil, if unsuitable, removed, and a mixture of loam and rotten dung, or loam, leaf soil and dung, substituted. When the flower buds appear, protect with lights, and give plenty of air, but dispense with the lights as soon as possible after the flowering season. For naturalization and wild gardens, the Christmas Rose is a grand plant.

.....	each—s. d.
..... <i>Niger maximus</i> (the Great Christmas Rose), figured in "The Garden," 1878, under the name of <i>Helleborus altifolius</i> . This is a grand species, and is as remarkable for its large dark green leaves, as for its very large rose-tinted flowers, which are pure white if opened under the protection of a hand-light or frame, after the flower buds appear.....	1/6, 2/6 & 3 6

THE LILIUM (LILIES).

Bulbs supplied up to end of March.

THE LILY is matchless amongst hardy plants, for variety of colour, chasteness, and beauty of form. It commences flowering in May, and maintains a continuous unbroken succession of bloom, from species of different countries, till the frosts of autumn destroy the last unexpanded flower buds; thus it is unequalled for its successional display, and is an important plant to associate in beds or borders with Rhododendrons, Pæonias, Double Pyrethrums, and Herbaceous plants generally.

[Barr and Son,

THE LILIUM—continued.

CULTURE OUT-OF-DOORS.—In its native habitat the Lily is usually found growing amongst brushwood or long grass, in soils of varied texture, but always sweet and well drained; so that, in choosing a situation for planting, *perfect drainage*, natural or artificial, should be the first consideration. The borders of Rhododendron and Azalea beds are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants in spring and affording a partial shelter from the sun's rays in summer; amongst dwarf shrubs, or herbaceous plants, in the proximity of trees or other shelter, the Lily succeeds best if care is taken that there is sufficient atmospheric exposure to prevent the plants making a feeble growth. In the preparation of ground for Lilies, loosen the soil to a depth of several feet, and add fresh loam, coarse sand, sweet decomposed leaf soil, or good peat, care being taken that the soils are as free as possible from insect life, and the compost sufficiently friable. Plant the bulbs 4 inches deep (except where otherwise stated), and if all things are equal, they may remain undisturbed for many years. The bog or swamp-loving Lilies, *Supsbium*, *Canadense*, and the varieties of *Pardalinum*, require a moist peaty soil and rather shady situation. Rockwork and artificial mounds, such as may be seen in the Edinburgh Botanic Gardens, are admirable for Lilies, there being sufficient choice of aspects, soil, and drainage—thus the majestic bog-loving lilies would occupy the base with marsh plants, and the other species such positions as are best suited to them.

CULTURE IN-DOORS.—When grown in pots, the Lily should have a compost of fibry loam and sweet decomposed leaf soil, with plenty of coarse sand, or good peat, loam, and sand, the bulb being potted firmly, and the top covered at least two inches; this done, *plunge the pots in ashes out of doors, under a wall or hedge, facing the north*; there let the Lilies remain till the flower buds are formed, when they may be removed to the conservatory, corridor, or sitting-room. *Lilies in pots, when removed from the ashes, should have clear weak liquid manure twice a week. The drainage of the pots must be good, and no stagnant moisture tolerated in the plunging ground.* *Superbum*, *Canadense*, and the varieties of *Pardalinum*, prefer moist sandy peat.

ED Where necessary, we have stated the special soils that should be used for the different species.

.....	AURATUM (The White Golden-rayed Crimson-spotted Hill Lily of Japan). This is, indeed, the Queen of Lilies, and should have a place in every garden and conservatory. It is of simple culture and perfectly hardy. Out-of-doors it should be planted 9 in. to 12 in. deep in good fibrous loam.

PERENNIAL ASTERS, OR MICHAELMAS DAISIES.

A very useful and elegant family of summer and autumn-flowering hardy plants, of which we offer, below, a select list of the best and most striking varieties.

The taller growing varieties are invaluable for large herbaceous borders, or for masses and groups in the wild garden, etc. The dwarf sorts have a pleasing effect in rock-gardens, and also make charming pot-plants. The graceful spikes and racemes of flowers are very useful for cutting, and last a considerable time in water.

BARR AND SON'S SELECTIONS OF MICHAELMAS DAISIES.

HARDY PERENNIAL PHLOXES.

JULY, AUGUST, AND SEPTEMBER-FLOWERING.

These Hardy Perennial Phloxes are very decorative; their flowers are brilliant in colour and range from pure white to the richest crimsons, and purples, and the most beautiful salmon. In growth they are elegant and stately. Their culture is simple. They succeed in almost any soil or situation. A mulching of manure in spring is beneficial, and in very hot weather an occasional soaking of water.

BARR'S SELECTION OF HARDY PERENNIAL PHLOXES.

25 in 25 fine vars., 15s.; extra fine vars. 21s. | 12 in 12 fine vars. 6s. and 9s.; extra fine vars. 12s.

Purchasers can make their selections at the rate of 9s. per dozen, except where priced.

		<i>Themis</i> , large snow-white flowers, large heads
		<i>Venus</i> , white, slightly shaded pink, rose-purple eye

HANDSOME HARDY PERENNIAL SUNFLOWERS AND THEIR ALLIES.

It would be impossible to describe the grand effect of these late summer and autumn-flowering Sunflowers, when planted in groups in shrubberies, or massed in flower borders, or used to fill large beds in grass, or to naturalize. They are all profuse bloomers, and succeed in almost any soil or situation. Where cut flowers are wanted for church decoration or table bouquets, the quantity is unlimited.

HEMEROCALLIS (Decorative Day-Lilies).

These are exceedingly ornamental hardy border plants, and also admirable for shrubberies and wild gardens. The flowers all open well in water, especially *H. Flava* and *H. Thunbergi*, which are greatly prized for bouquets, on account of their beautiful soft colour and delicate perfume.

HEPATICA (Old English Flowers).

These charming Spring flowers have been favourites in English gardens from time immemorial. Established masses or clumps of *Single blue*, *Single red*, *Double red*, and *Angulosa*, we offer and recommend, as they are decorative at once; the other varieties we can only offer as plants.

BEAUTIFUL HARDY TERRESTRIAL ORCHIDS.

These beautiful hardy Orchideae are of easy culture, and should have a place in all good collections of plants. Their grand spikes of bloom are of exquisite beauty. A special bed should be made for this family of plants, say at the foot of a rockwork, in a damp and shady situation. The soil should be rough boggy peat to the depth of 18 inches. Most of the species will grow luxuriantly in such a situation, but there are a few that like a little different culture. We therefore indicate the treatment of each species by the following signs.

* Soil, peat and loam in a shady situation, with abundance of moisture.

† Soil, peat, loam, and leaf mould, in a well-drained shady situation, damp at all seasons.

|| Plant between pieces of limestone, in a well-drained loam, and slightly shady situation.

§ Soil, leaf mould, peat and sand, keep rather damp in summer but dryer in winter, shady situation.

.....	†	<i>Bletia hyacinthina</i> , a fine Chinese orchid of easy culture, with beautiful deep rosy pink flowers.	each—s. d.
		Much grown in China for its grateful perfume, June-flowering, 1 ft.	per doz. 21/ 2 6
		<i>Cypripedium</i> (Lady's Slipper), hardy bog-plants of exquisite beauty, for in or out-of-doors.	
.....	\$,, <i>acaulis</i> , beautiful large rose-coloured flowers, ht. $\frac{3}{4}$ ft.	1/6 & 2 6
.....		,, <i>calceolus</i> , brown-purple and bright yellow, handsome, ht. $1\frac{1}{2}$ ft.	1 6
.....		,, <i>macranthum</i> , handsome Siberian species, with large purple-crimson flowers, very beautiful. Awarded a First-class Certificate, 1886, ht. 1 ft.	3 6
.....	\$,, <i>montanum</i> , a beautiful Californian species, with flowers brown-purple and white, striped red, ht. $1\frac{1}{2}$ ft. Figured in "Regel's Gartenflora"	3 6
.....	*	,, <i>parviflorum</i> , small showy bright yellow and purple-brown fragrant flowers, ht. $\frac{3}{4}$ ft.	2 6
.....	†	,, <i>pubescens</i> , large yellow and brown flowers; a beautiful species of easy culture, ht. 1 ft.	2 6
.....	*	,, <i>spectabile</i> (Moccasin Flower), large pure white, and delicate rose flowers; the most beautiful of all, ht. $1\frac{1}{2}$ ft.	2/6 & 3 6
		One of each of the above-named species of <i>Cypripedium</i> , 15s.	
.....		<i>Habenaria bifolia</i> (Butterfly Orchis), spikes of flowers, pure white	1 0
.....	,,	<i>ciliaris</i> (Yellow Fringed Orchis), most beautiful spikes of showy bright orange flowers, with elegantly fringed sepals; grow in sphagnum, in damp and partially shaded situations, ht. $1\frac{1}{2}$ ft.	1 6
.....	*	,, <i>fimbriata</i> (Fringed Orchis), one of the most beautiful, spikes of flowers varying in colour from rose to crimson, and lasting long in bloom, June-flowering.	1 6
.....		<i>Ophrys</i> and <i>Orchis</i> , 12 in 12 distinct beautiful hardy varieties.	10/6 & 15/
.....	,,	6 in 6 5/6 & 7/6	
		<i>These are all curious and striking, some bearing flowers resembling bees and other insects.</i>	
.....		<i>Ophrys apifera</i> (Bee Orchis), bright rose-purple, and rich velvety-brown, flowers closely resembling a bee in form and appearance	1 0
.....	\$	<i>Satyrion albidum</i> , spikes of white flowers, 1 ft.	2 6
.....	,,	<i>carneum</i> , handsome spikes of bright rose and white flowers, ht. $1\frac{1}{2}$ ft.	2 6
.....	,,	<i>coriifolium</i> , fine spikes of soft-orange yellow flowers, splashed crimson	3 6
.....	,,	<i>erectum</i> , spikes of yellowish orange flowers.	2 6
		<i>Beautiful Frog Orchids, with remarkable broad fleshy leaves, and stout spikes of handsome-hooded flowers; they are of easy culture, but should have a slight covering during winter.</i>	

FREE-FLOWERING CLOVES AND PINKS.

These produce, in summer, masses of brilliantly coloured flowers, deliciously scented, which for cutting are greatly prized. For the decoration of beds and borders they are invaluable.

CLOVES.

CLOVES.			each—s. d.
.....	True Old Scarlet, very free-flowering	per 100, 50/-; per doz.	7/6 0 9
.....	True Old Crimson, delightfully fragrant.....	" 42/-	5/6 0 6
